

DINOSAURS

AND ENDANGERED SPECIES

AN EXCITING NEW MENAGERIE OF CREATURES FOR
DISPLAY OR PLAY

*Triceratops brought
back to life!*

Great care has been taken sculpting each of the dinosaurs and animals in the collections. Our sculptors researched each of the creatures to discover all that is known about each one at this time. Our dinosaur advisor, Professor Mike Benton, shared his knowledge about some of the finer anatomical details of dinosaurs and also what the latest theories are, based on recent discoveries.

✕ Quarter scale Dinosaurs ✕

Dinosaurs are always a real crowd pleaser with kids and adults alike, but the problem has always been lack of space for a full size dinosaur.

SCALED DINOSAURS?

After much consultation it was decided to sculpt the dinosaurs at a quarter of their true scale. This allows the dinosaurs to be about the size of a 9 year old child - a manageable size that can be fitted into a variety of venues: Theme parks, municipal playgrounds, museums, photo opportunities at malls, even carousels.

It also means a great saving in space so that venues can display many of the most well known dinosaurs in a more moderate space. The figures can be placed in either indoor or outdoor environments to allow integration into existing themed or landscaped areas.

2007 catalogue

- T-Rex
- Kronosaurus
- Camarasaurus
- Triceratops
- Stegosaurus.

2008 catalogue

- Pachycephalosaurus
- Muttaborrasaurus
- Dimetrodon
- Parasaurolophus
- Ankylosaur

ENDANGERED SPECIES

In 2007 we will be adding a menagerie of endangered species to our catalogue.

Adult and baby animals will be represented.

Animals included:

- Polar bears
- Pandas
- Elephants
- Tigers
- Lions
- Rhinos
